updates on teleconferencing platforms

# Microsoft Teams

*Microsoft Teams integrates email, chat, document processing, conferencing and calendar in a single platform. You can logon to Microsoft Teams using your Office365 account.*

"Microsoft has fixed a security flaw in Microsoft Teams that, if left unattended, could have been exploited to take over user accounts."
https://www.welivesecurity.com/2020/04/27/microsoft-teams-flaw-gif-account-takeover/

"A phishing attack using a notification from Microsoft Teams in an effort to trick people into revealing their credentials is spreading through emails that use convincing content."
https://securityboulevard.com/2020/05/microsoft-teams-phishing-attack-wants-your-office-365-credentials/

# Google Meet

*Hangouts is now Google Meet*

"Google was making Meet free to anyone with a Google account and allow meetings of up to 100 people with no time limits."
https://www.theverge.com/2020/5/4/21246277/google-meet-gmail-zoom-hangouts

"Google outlined a series of security controls in Meet that include host controls to remove participants and control entry, require a Google account, encryption in transit, and no plug-ins."

# Zoom

*Zoom 5 is now out. This latest version addresses a number of security concerns.*

"Zoom tightens up security with version 5"
https://www.theregister.co.uk/2020/04/22/zoom_5/

"Zoom was also quick to take actions on changing the defaults that helped address meeting privacy concerns, as well as setting a 90-day plan for deeper actions, and communicating it publicly."
https://www.globenewswire.com/news-release/2020/04/22/2020030/0/en/Zoom-Hits-Milestone-on-90-day-Security-Plan-Releases-Zoom-5-0.html
