# 4 TIPS TO PROTECT YOUR PRIVACY

01. Minimize Information Sharing

Only provide the necessary personal details required to complete an online transaction.

02. Avoid Public Devices

Refrain from logging in to your accounts on public computers, such as those in libraries, internet cafes, or hotel. If really necessary, use VPN.

03. Use Cellular Data

Use your cellular data connection instead of public Wi-Fi for browsing the internet or accessing sensitive information.

04. Review Permissions

If an app asks for permissions that seem excessive or unrelated to its purpose, it could be a red flag.
